Cell Autonomous and non - cell autonomous effects of mitochondrial DNA polymorphisms on cancer metastasis:
Potential clinical biomarkers?

Danny R. Welch, PhD
Professor and Chair, Department of Cancer Biology
Kansas University Medical Center
Hall Family Professorship in Molecular Medicine
Associate Director for Basic Sciences
Associate Director for Education
Kansas University Cancer Center

At the conclusion of this activity, the participant will be able to:

1. Describe the relevance of mitochondrial genetics as co-factors in regulating breast cancer metastasis
2. Describe how mitochondrial function in stromal cells can influence cancer metastasis
3. Illustrate how mitochondrial polymorphisms could be biomarkers to predict cancer metastasis
